

Thameslink Programme

THE PROJECT

The Thameslink Programme was an ambitious 10-year programme of extensive infrastructure enhancements and the delivery of 115 new trains that have brought faster, more reliable, better connected journeys for passengers transforming North to South travel through London.

AM1 Projects were awarded several packages of multi-disciplined works, that included LV, Civils, ETE and HV defect rectifications on the busy route.

Project Value

£10M

THE DELIVERABLES

- Site surveys.
- Management of access and possessions.
- Temporary power.
- New LV distribution panels.
- S&T modifications.
- M&E installations at TP huts.
- Civil works installation.
- Renewals of HV feeder cables.
- Cable route & management systems installations.

CHALLENGES & SOLUTIONS

The geographical location and the volume of traffic on the route meant that access opportunities were limited. By meticulously planning and co-ordinating our work with other stakeholders we were able to maximise available access opportunities, thereby increasing the efficiency of our on-site activities and reducing the programme of work.
